SUMMARY

Second-year Computer Science student at SUTD with hands-on experience shipping automation tools, data pipelines, and web applications in real-world environments.

Driven by a curiosity for how systems work and where they break, I enjoy identifying inefficiencies, designing solutions, and building things that create tangible business impact.

Skilled in Python, C++, full-stack development, and process automation.

TECHNICAL SKILLS

- Python , C++
- Process Automation
- AI / Machine Learning
- Data Engineering
- Embedded Systems (Arduino, RPi)
- Cybersecurity Fundamentals
- Cloud Basics (AWS, Azure)
- Git , Linux

ACHIEVEMENTS

- Best Sustainable Design Award
- EAGLES Leadership Award
- Edusave Academic Achievement Award
- Service to School Award

EXPERIENCE

Business Automation Intern Sept 2025 — Jan 2026
Central Provident Fund Board (CPF) · Singapore

- Identified manual workflow bottlenecks across government operations; independently scoped, built, and deployed web applications that eliminated those processes entirely.
- Conducted stakeholder interviews and process mapping to uncover automation opportunities, translating business pain points into concrete technical specifications.
- Built data pipeline scripts integrating with enterprise backend systems, improving data accuracy and reducing processing overhead for operational teams.
- Engineered automated workflows using Python and RPA tooling; designed test suites to validate reliability before production rollout.

IT Trainee Mar 2024 — Jun 2024
Altrocks Tech Pte Ltd · Singapore

- Diagnosed and resolved hardware, software, and network issues across client environments, applying systematic debugging methodologies to cut resolution time.
- Authored a structured internal knowledge base of technical solutions, standardising troubleshooting workflows and accelerating onboarding for new staff.
- Assisted in configuring and maintaining network infrastructure, gaining hands-on exposure to network administration and system management.

EDUCATION

Singapore University of Technology and Design 2024 — 2028
Computer Science Degree

Selected projects:

- **Business Ops Dashboard**
Full-stack web app (React, Flask, SQLite) built for a business owner to track sales, expenses, and inventory in real time, replacing manual spreadsheet workflows.
- **Classroom Assistant Robot (Best Sustainable Design Award)**
Award-winning Arduino & Raspberry Pi system with live speech-to-text, motorised camera tracking, and Bluetooth. Built in Python and C++.
- **Memory Card Game for Dementia Patients**
Accessible Python/Tkinter application for elderly users with dementia; focused on simplicity, accessibility, and user-centered design.
- **Cybersecurity via Phantom CTF**
CTF challenges covering reverse engineering, binary exploitation, cryptography, and web vulnerabilities.
- **Parametric Design Automation**
Scripted generative 3D models in Rhino/Grasshopper; automated geometric workflows and produced print-ready prototypes.

Catholic Junior College 2022 — 2024
GCE 'A' Level · H2 Physics, Chemistry, Mathematics, Economics

- Represented school in STEM and computing competitions, demonstrating algorithmic thinking and digital problem-solving.
- Applied data analysis techniques for Project Work researching elderly-related issues; synthesised qualitative and quantitative sources.
- Led the Debate Society as peer mentor, organised training sessions, mentored junior members, and achieved national competition success.
- Active in student-led volunteer initiatives, consistently delivering strong outcomes and earning school-wide recognition.
